The AssayReady4U™ is a customer-specified assay in a ready-to-use, single-use well plate. The assay is intended for drug discovery, compound efficacy, drug toxicity, or protein-protein interaction from cell-based, rapid PCR, RNAi, siRNA or qPCR-type assay screens.

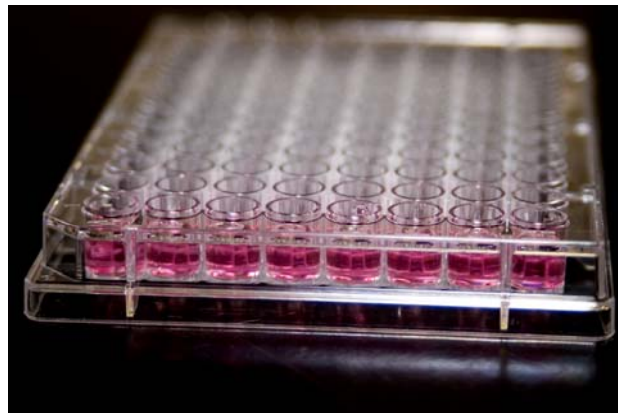

ChemPrintCo licenses commercially available pharmacophore-rich collections of hit-like and drug-like compounds from the leading compound suppliers from around the world.

These libraries are dispensed accurately into SBS standard well plate formats using proprietary hydro-acoustic technologies.

Each AssayReady4U is available in 96, 384, 1536 and 3456-well formats. Final test concentrations range from 0.1 μ Molar to 10 μ Molar and are specified by the research scientist. (Other concentrations may be available upon request.)

ChemPrintCo manages the acquisition, storage, distribution, order processing, and the shipment of the compounds and assays. Each order is shipped within 24 hours of completion using a commercial express delivery service. This allows individual scientists to focus on their research and discover results faster.

- Search across multiple libraries
- Utilize molecular visualization tools
- Add families, sub-groups, or individual compounds to your order
- Select your final test concentration and test volume
- Choose the well plate format
- Identify optional empty control wells
- Select the number of replicates
- Indicate your method of payment
- Your AssayReady4U will be shipped within 24 hours of completion
